

DIFFERENCE BETWEEN DATA SCIENCE AND DATA ANALYTICS

Big data is a significant component in today's tech world, owing to the actionable insights and results in businesses can garner. However, creating such large datasets also needs understanding and having the right tools to parse through them to unravel the correct information. For a better experience, big data, data science, and **data analytics fields** have gone from mainly being relegated to academia to being integral elements of Business Intelligence and big **data analytics** tools.

Despite this, it cannot be obvious to differentiate between data analytics and data science. Even though the two are interconnected, both offer different results and pursue different approaches. If you want to study what your business is producing, it is essential to earn Data Science Training.

Interesting, right?
